# 1 Subfile Template

This is a template for a subfile for a  $\text{\LaTeX}$  project. To be able to use this file you need to call it in the **main.tex** file with the following command:

```
\subfile{section/subfile.tex}
```

The path can be edited to import file from different locations.

You may replace this section between the code comment to write your own.

**Note:** All subfile from this template always start as a new page, if you wish not to remove the `\newpage` at the top of the file.
