1   Subfile Template

This is a template for a subfile for a LaTeX project. To be able to use this file you need to call it in the **main.tex** file with the following command:

$$\text{\textbackslash subfile\{section/subfile.tex\}}$$

The path can be edited to import file from different locations.
You may replace this section between the code comment to write your own.

Note: All subfile from this template always start as a new page, if you wish not to remove the \newpage at the top of the file.
